
1 image unit = 270 nm; clear-disk Airy reference = 164.7 nm. PSF relative L2 error = 0.01026
Ideal: no dent
True dent: direct diffraction
From Zernike coefficients
s_y = NA y / wavelength
s_x = NA x / wavelength
I / no-dent in-focus peak
Same normalization: no rescaling of each peak
s_x at s_y=0
Ideal: no dent
True dent: direct diffraction
From Zernike coefficients
Encircled energy about the reference origin
Fraction of total FFT-plane energy
Radius s
Reconstructed minus true intensity
s_y
s_x
Difference / no-dent in-focus peak
