
1 image unit = 800 nm; PSF relative L2 error = 0.0005796
Ideal: equal layers
Thickness deviation
Zernike complex-pupil fit
s_y
s_x = NA x / wavelength
I / unit-reflector peak
Brightness and shape together
Absolute normalized intensity
s_x at s_y = 0
Ideal: equal layers
Thickness deviation
Zernike complex-pupil fit
Unit-flux comparison isolates shape
Intensity / full-array sum
Reconstructed minus true image
s_x
1e−7
Intensity difference
